**butterflies and climate change - naba** - and december 2009 about climate change and/or biodiversity. only 9 out of 73 papers that showed a link between climate change and declining biodiversity studied insects, eight of which dealt with lepidoptera. these papers showed butterflies to be very sensitive to climate change, but there is much we still don't know. i would advocate for not

**the butterfly - manitoba** - the butterfly the last, the very last, so richly, brightly, dazzlingly yellow. perhaps if the sun's tears would sing against a white stone! such, such a yellow is carried lightly ~way up high. it went away i'm sure because it wished to kiss the world goodbye. for seven weeks i've lived in here, penned up inside this ghetto

**where to see the monarchs in california** - most overwintering sites in california are on private

property and not easily accessible to the general public. the monarch program recommends public viewing at the overwintering sites listed below. the time to see the greatest numbers of butterflies is mid-november to mid-december. in late
